

NEUSIDL CORNEAL INSERTER (NCI)

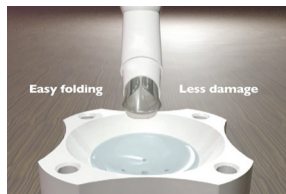

The Rocky Mountain Lions Eye Bank is now the exclusive provider of the Neusidl Corneal Inserter (NCI) in the Rocky Mountain region. The NCI meets the requirements of an ideal inserter for DSAEK procedures.

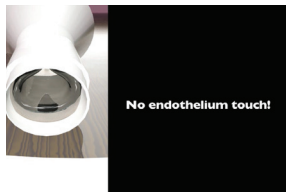

The advantages of the NCI:

Tissue/graft spatula and inserter in one.

Folds donor tissue without overlap.
No viscoelastic required.

Endothelial cells never come into direct contact with each other or instrument.

Protects tissue from direct compression during insertion through incision (5.2 mm).

Eliminates need for separate AC maintainer.

Built-in irrigation channel deepens AC to prevent tissue trauma during insertion.

Platform unfolds donor button in AC without additional manipulation. No need to mark tissue to determine proper orientation.
